

BRUNO GREBSTELIS

EMBEDDED SYSTEMS & SOFTWARE ENGINEER

CONTACT

Riga, LV-1035
+371 26639072
bgrebstelis@gmail.com

SKILLS

- **Microcontroller Programming** (STM32)
- **Single-Board Computer Programming** (Raspberry Pi)
- **Circuit Design and Debugging**
- **PCB Design and Prototyping**
- **Embedded Systems** (SPI, I2C, UART, RS485)
- **GUI** (Python)
- **IoT** (Telegram Bot)
- **Problem-Solving**

LANGUAGES

- **Latvian:** First language
- **English:** Advanced
- **Russian:** Advanced

Accomplishments

- Represented Latvia in the FIRST Global Robotics Challenge (2018, 2019), collaborating with international teams on engineering challenges.

EDUCATION

2024 | ITMO University | Saint Petersburg

Bachelor of Science Electrical engineering

Completed coursework in embedded systems, programming (Java, C, Python), electronics, electrical machines, microcontroller programming, power electronics, and automatic control theory.

EXPERIENCE

December 2022 – February 2023

Electrical Engineering Intern | SIA G11 | I contributed to the development of a DYNO system.

February 2023 – August 2024

Embedded Engineer Intern | ITMO University | I developed a dual closed-loop DC motor drive and a corresponding test bench. Additionally, I engineered a highly accurate battery monitoring system to measure voltages and currents for battery life expectancy research.

October 2024 – Present

Independent Engineer | Self-Employed | Developing a flower vending machine controlled by a Raspberry Pi with Python-based software that includes a GUI, card reader communication, and STM32 integration. The STM32 handles locker control, LED drivers, price-tag display, and environmental monitoring via SPI, I2C, and UART. Designed custom PCBs for the LED drivers, 7-segment displays, and main board. Integrated a Telegram bot for real-time monitoring.
